

Best Practice

Service: Consulting, Training, Assessments

Solution Suite: Business Development, Business Analysis, Professional Development, Project Management

Best Practice: PIE (Practical. Interactive. Experiential) System

The AMS PIE System is a scalable and consistent service delivery model used to deploy our Consulting, Training and Assessment solutions. The PIE approach incorporates best practice's, measurability and quality control elements to ensure our clients recognize sustainable ROI and results.

Practical - Holistic approach to solutions development/deployment.

Interactive – Collaborative/client focused engagement model.

Experiential - Executive level practitioners transferring real-world knowledge.

The PIE journey begins with the following components:

	<p>Design – The design component of the PIE System offers a scalable and interactive platform, utilizing the voice of the customer to determine appropriate levels of customization and client needs alignment, deployed through the pre-work phase.</p>
	<p>Experience – The experience component of the PIE System draws on AMS' global, cross-industry, executive experience to create an interactive learning environment through the delivery phase.</p>
	<p>Relationship - The relationship component of the PIE System utilizes AMS account management best practices to provide continuous learning through participant action plans and measurement of knowledge transfer, resulting in enhanced productivity and business effectiveness. Through the post-delivery process AMS collaborates to identify further continuous learning objectives/paths in the sustainability phase.</p>

The PIE System provides a stable implementation methodology through the following phases:

The PIE System is consistently applied through the following AMS service channels:
